Comments: Part C, Q1 B: EP Lab is reserved for implants, EP studies and ablations. No cath procedures are performed in this room. The reporting tool would not allow an insertion of a "0" in the # of cath procedures field, therefore, a .01 was entered as a placeholder. Part C, Q2 A: A single patient who received a balloon angioplasty is counted in both lines. All Stent patients undergo balloon angioplasty. Part C, Q3 B: Angiograms/Venograms, Angioplasty and Stents are not reported in this section; they are reported in Part C, Q2 C instead. Part D, Q1: MSDRGs were used for this section of the survey based on the crosswalk provided by DCH. The instructions for this question say to use the average total charge for the patient from admission to discharge for each DRG. However, the column heading says "in lab". To be consistent with how we have reported this data in previous years, we reported total patient charges, not just cath lab charges. Reimbursement is also for the total inpatient stay as it cannot be accurately divided into service components. Part D, Q2 through Q6: Total patient charges were used in all of these calculations. Part D, Q4: To prevent reporting a number that is forever changing as patients get qualified for charity subsequent to the discharge date, we included all charity/ indigent write-offs on cardiac cath patients that took place in calendar year 2008 regardless of discharge date. Part D, Q6: The number of unduplicated cardiac cath patients in Part D, Q6 is more than the unduplicated counts in Part C, Q4 and Q5, and Part F. This is because 4 patients had different primary payment sources in a subsequent visit to the facility.
