Comments: Part C, Q1 B: SJH does not track procedures by cath lab room; accordingly, SJH has allocated procedures as shown on survey. EP Lab is reserved for implants, EP studies and ablations. No cath procedures are performed in this room. The reporting tool would not allow an insert of a "0" in the # of cath procedures field, therefore, a .001 was entered as a placeholder. Part C, Q2 A: A Single patient who received a balloon angioplasty is counted in both the balloon angioplasty and stent lines. All stent patients undergo balloon angioplasty. Part C, Q3 B: Angiograms/Venograms, Angioplasty and Stents are not reported in this section; they are reported in Part C, Q2 C instead. Part D, Q1: MSDRGs were used for this section of the survey based on the crosswalk provided by DCH. The instructions for this question say to use the average total charge for the patient from admission to discharge for each DRG. However, the column heading says "in lab". To be consistent with how SJH has reported this data in previous years, SJH reported total patient charges, not just cath lab charges. Reimbursement is also for the total inpatient stay as it cannot be accurately divided into service components. This 2010 survey calculates average reimbursement consistent with the survey directions to exclude certain categories of patients. SJH's 2009 survey calculated average reimbursement for all payor classes. Part D, Q4: To prevent reporting a number that is constantly changing as patients get qualified for charity status subsequent to the discharge date, SJH includes all charity/indigent write-offs on cardiac cath patients that took place in calendar year 2010 regardless of discharge date. Part D, Q6: The number of unduplicated cardiac cath patients in Part D, Q6 is more than the unduplicated counts in Part C, Q4 and Q5, and Part F. This is because two (2) patients had different primary payment sources in a subsequent visit to the facility.
